**Product Overview**

**Product Presentation**

Filter elements are efficient only if their dirt holding capacity is fully exploited. This is achieved by using filter housings equipped with DEH Series clogging indicators.

These devices trip when the filter elements become blocked which causes an increase in the pressure drop across the filter.

The indicator is set to alarm before the element becomes fully clogged. This indicator will reduce the frequency of replacing filter elements as well as maximising the performance of each filter.

- Constructed from AISI 316 stainless steel 420 bar (6,091 PSI)
- 420 bar (6,091 PSI) maximum working pressure
- Approved for use in hazardous environments
- ATEX, IECEx, UL, CSA and TRCU, EAC certified
- Temperature class T4 (135°C) and T6 (85°C)
- Protection grade IP66 or IP67 when used with suitable cable gland
- Indication range from 5 bar to 7 bar
- Suitable for use with all MP Filtri stainless steel pressure filters and cast iron pressure filters

**Benefits**

- Prevents machinery failures
- Cuts unplanned downtime
- Critical early warning system
- Saves time and costs
- Improves safety

**Disclaimer**

As part of our policy of continual improvement, MP Filtri reserves the right to alter the specification without prior notification.

---

**Area of Application**

Hazardous Area Indicators can only be used in the appropriate zone classification.

Ex d indicators should only be used in zones 1 and 2 - zones in which potentially explosive atmospheres created by gases, vapours or mists are unlikely to occur in normal operation. In the event of an occurrence, the situation will persist for only a short period.

Ex ia indicators can be used in zones 0, 1 and 2. These are suitable in an area where explosive atmospheres are continually present. For more information please see section 7-certification.
EC Declaration of Conformity

Product Manufacturer:
MP Filtri UK

1 General Warnings and Information for the End User

1.1 General Safety Warnings

Do not operate, maintain or carry out any procedure before reading this manual. Any individual operating the unit shall wear the following Personal Protective Equipment:

- Protective eyewear
- Safety shoes
- Gloves
- Overalls (or other suitable protective clothing)

Before carrying out any machine installation procedures and/or before use, one should scrupulously follow the instructions listed in this manual. Moreover, it is necessary to comply with the current regulations related to occupational accident prevention and safety in the workplace.

Notices aimed at the prevention of health hazards for personnel operating the machine are highlighted in this document with signs having the following meaning:

| WARNINGS | Relates to important information concerning the product, its use or part of this documentation to which special attention must be paid |
| CAUTION | Failure to comply with the relevant safety regulations may result in mild injury or property damage. |
| DANGER | Failure to comply with the relevant safety regulations may result in death, serious injury or serious property damage. |

Failure to comply with the relevant safety regulations may result in death, serious injury or serious property damage.
1.2 Operator Information and Warnings

**INFORMATION**
This pressure unit must only be operated in conjunction with the appropriate machine or system.

**INFORMATION**
The pressure unit must only be used in strict accordance with the requirements of the operating instructions of the machine or system.

**INFORMATION**
This pressure unit must only be operated using hydraulic or lubricating fluid.

**CAUTION**
The user must, by appropriate action (e.g. venting), prevent the formation of air pockets.

**CAUTION**
Repair, maintenance work, and commissioning must be carried out by trained personnel only. Personnel must ensure the pressure unit has cooled down before handling. Operating instructions for the machine or system must be strictly followed.

**DANGER**
Caution: Before any work is carried out on the pressure unit, operators must ensure the pressure chamber concerned (filter housing) is depressurised.

**DANGER**
No alterations, such as welding, drilling, or opening by force, are to be carried out on the pressure unit.

**CAUTION**
Statutory accident prevention regulations, safety regulations and safety data sheets for fluids must be observed.

**CAUTION**
When working on, or in the vicinity of, the hydraulic system, naked flames, spark generation and smoking are strictly forbidden.

**CAUTION**
Hydraulic oils and water polluting fluids must not be allowed to enter the soil, watercourses or sewerage systems. Operators must ensure safe and environmentally-friendly disposal of hydraulic oils. The relevant regulations in the country concerned with regard to ground water pollution, used oil and waste must be followed.
2 Transportation and Storage

2.1 Transportation and Handling Conditions
The unit is shipped in a cardboard box encased in polyurethane foam insert along with a copy of certification and installation documentation.

2.2 Storage
The unit should be stored in a suitable location where the unit is not exposed to excessive heat or water and dust ingress.
3 Warranty, Limitations and Disclaimers

MP Filtri warrants that the products that it manufactures and sells will be free from defects in material, workmanship and performance for a period of 12 months from the date of shipment.

Hardware/Firmware
Should the hardware prove defective during the warranty period, MP Filtri, at its discretion, will either repair the defective product or replace it with an equivalent product in exchange for the defective unit without charge for parts, labour, carriage and insurance.

Eligibility
This warranty extends to the original purchaser only or to the end-user client of a MP Filtri authorised affiliate.

How to obtain service?
To obtain service under the terms of this warranty, the customer is required to notify MP Filtri before the expiration of the warranty period and to return the item in accordance with MP Filtri product return policy. Any product returned for warranty repair must be accompanied by a full fault report specifying the symptoms and the conditions under which the fault occurs. Should MP Filtri incur additional cost as a result of a failure to complete the appropriate paperwork, an administrative charge may be levied.

Exclusions
This warranty shall not apply to any defect, failure or damage caused by improper use or improper or inadequate care. MP Filtri shall not be obligated to provide service under this warranty if:

a) Damage has been caused by a failure to make a full and proper inspection of the product (as described by the documentation enclosed with the product at the time of shipment) on initial receipt of the product following shipment;

b) Damage has been caused by the attempts of individuals, other than MP Filtri staff to repair or service the product;

c) Damage has been caused by the improper use or a connection with incompatible equipment or product including software applications.

Charges
Under cover of this warranty, MP Filtri will pay the carriage and insurance charges for the shipment of defective product back to site of manufacture and for its return to the client’s original site of despatch except when:

a) MP Filtri product return policy has not been followed.

b) Product failure is caused by any of the exclusions described above, when the customer will be liable for the full cost of the repair (parts and labour) plus all carriage and insurance costs to and from MP Filtri premises.

c) The product is damaged in transit and a contributory cause is inadequate packaging. It is the customer’s responsibility to ensure that the packaging used to return equipment to MP Filtri is the same, or has equivalent protective qualities, to that used to ship the product to the customer in the first instance. Any damage resulting from the use of inadequate packaging will nullify MP Filtri obligations under this warranty. Should the customer’s product be damaged in transit following a repair at MP Filtri site, a full photographic record of the damage must be obtained (packaging and the product) to support any claim for recompense. Failure to present this evidence may limit MP Filtri obligations under this warranty.

THIS WARRANTY IS GIVEN BY MP FILTRI IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY, NON-INFRINGEMENT OR FITNESS FOR A PARTICULAR PURPOSE. MP FILTRI LTD SHALL NOT BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES OR LOSSES (INCLUDING LOSS OF DATA), WE SPECIFICALLY DISCLAIM ANY AND ALL WARRANTIES TO CUSTOMERS OF THE CUSTOMER, THE CUSTOMER’S SOLE REMEDY FOR ANY BREACH OF WARRANTY IS THE REPAIR OR REPLACEMENT, AT MP FILTRI DISCRETION, OF THE FAILED PRODUCT.

MP Filtri Ltd maintains a policy of product improvement and reserves the right to modify the specifications without prior notice.
4. TECHNICAL SPECIFICATION

4.1 GENERAL SPECIFICATION

- **Type of indicator**: Electrical Switch
- **Weight**: 5m Cable model: 750g (approx)
  M12 Short model: 270g (approx)
- **Seal material**: Various
- **Temp range**: See Section 4.4 -20°C to +100°C (T4)
- **Pressure setting**: 5 bar and 7 bar

### DEH SERIES - 5 METER CABLE INDICATOR Ex ia M20

**PROPERTIES**
- **Housing material**: 316 Stainless steel
- **Body shape**: Cylindrical
- **Connection type**: M20 x 1.5 - 3 core polyrad cable supplied with 5 metres
- **Temperature range**: -60°C to +125°C
- **Contact type**: SPCO/SPDT (Hermetically sealed - volt free contacts)
- **Contact material**: Rhodium (tungsten optional)
- **Dimensions**: 114 x 28mm
- **Ingress Protection**: IP 66/67/68

### DEH SERIES - 5 METER CABLE INDICATOR Ex d 1/2" NPT / UL Class I Div 1

**PROPERTIES**
- **Housing material**: 316 Stainless steel
- **Body shape**: Cylindrical
- **Connection type**: 1/2" NPT - 3 core polyrad cable supplied with 5 metres
- **Temperature range**: -60°C to +120°C - ATEC, IECEx, TRCU, INMETRO
  -60°C to +105°C - UL/CSA
- **Contact type**: SPCO/SPDT (Hermetically sealed - volt free contacts)
- **Contact material**: Rhodium (tungsten optional)
- **Dimensions**: 114 x 28mm
- **Ingress Protection**: IP 66/67/68

### DEH SERIES - M12 INDICATOR Ex ia RESIN SWITCH

**PROPERTIES**
- **Housing material**: 316 Stainless steel with internal engineered resin switch
- **Body shape**: Cylindrical
- **Connection type**: 4-pole male M12 connector - plastic
- **Temperature range**: -20°C to +80°C
- **Contact type**: SPCO/SPDT (Hermetically sealed - volt free contacts)
- **Contact material**: Rhodium
- **Dimensions**: 90 x 28mm
- **Ingress Protection**: IP 66/67

**DEH SERIES - 5 METER CABLE M12 INDICATOR**

- **Ex ia RESIN SWITCH**

**Dimensions in mm**

4.3 Wiring diagrams

Wiring instructions are available in section 5.3

4.4 Temperature Range

The maximum permissible operating temperature of the indicator is: T6 = 70°C for Exd, 80°C for Exia. T4 = 120°C for Exd, 125°C for Exia, 100°C for UL. If MFQ seals are used on the indicator, the lower temperature threshold can be dropped to -40°C. Surface temperature and/or general heat rise will mainly be generated by the fluid temperature or ambient temperature, as the indicator itself produces minimal heat. Due to this the fluid temperature must not be allowed to exceed these temperature ranges. T6 = 70°C for Exd, 80°C for Exia T4 = 120°C for Exd, 125°C for Exia 100°C for UL.
5. Product Installation and Maintenance Instructions

USER INSTRUCTIONS FOR DEH ELECTRICAL INDICATORS

5.1 Correct Usage

The electrical indicator is specifically designed for use with MP Filtri hydraulic pressure and in line filters, the indicator monitors differential pressure across the filter element. The indicators are made up of a certified switch assembly in a type approved enclosure with a pressure connection that acts on a piston and spring assembly to operate a switch, the movement of this piston is governed by the differential pressure across the element. The indicators should only ever be used within the parameters detailed in this manual, the indicator should match or be greater than the system operating pressure.

5.2 Installation Instructions

Warning - Prior to installation the filter must be depressurised.

1. Identify the pressure rating that is etched on to the body of the indicator.
2. Ensure that the maximum system working pressure does not exceed that of the indicator operating pressure.
3. Static build up may cause sparks between the components therefore it is crucial that the connections (pipes/hoses) are earthed separately and connected to the filter housing using electrostatic dissipative components only.
4. Before removing the indicator, to prevent a potentially hazardous situation, the depressurised system and filter must not be subject to potentially volatile atmospheres in the form of gases vapors or mist present.
5. Ensure that the seals and connecting threads are free from debris / contamination and that they are in a good working condition. Clean or replace seals that are defective or contaminated.
6. Inspect the filter housing and indicator thread for any signs of damage or contamination prior to installation, any signs of damage should be rectified prior to assembly.
7. Wetting the seals of the indicator with the system fluid will not only help the installation of the indicator into the cavity but it will also help reduce the risk of seal damage during the assembly process.
8. To prevent damage to the filter body or indicator housing threads ensure that the indicator screws freely into the housing by hand. Only once the indicator is seated should a spanner be used to achieve the final installation torque.

<td>VDMA 24568, HETG, HEES, HEPG.</td>
</tr>
<tr>
<td>Non-Flammable operating fluids</td>
<td>HFA, HFB, HFC &amp; HFD</td>
</tr>
</tbody>
</table>

For conductive filtration fluids, the conductivity must be greater than 10-10 S/m. The operating fluids used must be temperature resistant within the limits of the application. The sealing materials used must be resistant in respect of the operating fluids used.

5.5 Commissioning

Check that the correct indicator is fitted and that it securely in place. The electrical connection should be checked to see if the wire is held by the cable gland securely and that the gland itself is tight.

The system must only be put into operation once a system engineer has ensured that when the system is operating the permissible surface temperature according to Directive 94/9 EC will not be exceeded. It is also necessary to cross reference the hazardous area coding and check it is suitable for the area it is about to be used in.

Switch on hydraulic system and vent filter at an appropriate point in the system.

Check the indicator for leakage. If any leakage is present, shut the system down and vent any contained pressure. The indicator can then be inspected to check all components are tight. If the unit still leaks then it may be necessary to check the seals on the body by removing the indicator from its cavity. These can then if necessary be replaced in accordance with the spare parts list detailed in section 6.1

5.6 Electrical Connections

- **Integral cable versions**
  - Connector versions
  - N/C — Red
  - N/O — Black
  - COM — White

- **Testing**
  - **6 V**
  - **60mA**
  - **Euroswitch**
  - **DO NOT USE A "MEGGER" OR BELT TEST SET. USE A SIMPLE LAMP TESTER AS SHOWN OR AN OHM METER**
  - **OTHERWISE DAMAGE TO THE SWITCH MAY OCCUR**
  - **Testing must be carried out to site regulations. Do not use above method in hazardous areas**

5.7 System requirements Ex ia

The electrical circuit in the hazardous area must be capable of withstanding an ac test voltage of 500v rms to earth or frame of the apparatus for one minute. The power source must be certified by an EEC approved body to Exia or Exib, whichever is applicable. The capacitance and inductance, or inductance to resistance (L/R) ratio of the hazardous area cables must not exceed the value for the power source in use. For cable runs over 2M the following applies: $C_i = 120pF/M$ and $L_i = 0.7μH/M$. Safe area apparatus is unspecified except that it must not be supplied from, nor contain under normal or abnormal conditions, a source of potential with respect to earth in excess of 250 volts rms or 250 volts dc.

Condition of Safe Use of EX ia and EX d

- When used in a dust atmosphere the separately certified cable gland arrangement must maintain the IP6X rating of the enclosure.
- External earth bonding of the stainless steel filter maybe achieved via the filter mounting thread.

For UL/CSA Only:

7A Supplementary fuse to be installed on supply lines. Supply wires must have a minimum temperature rating of 75ºC Single Seal

#### 7.5 FATIGUE DECLARATION / IDENTIFICATION STATEMENT

Method of fatigue pressure testing conforms to ISO 10771-1, Hydraulic fluid power – Fatigue pressure testing of metal pressure containing envelopes – Part 1: test method

The DEH range has been tested and approved for a 1 million pressure cycle lifetime excluding polymer seals.

<table>
<thead>
<tr>
<th>Pressure Range</th>

</tr>
</tbody>
</table>
8. SERVICING

8.1 General Information
Servicing and maintenance work should be carried out periodically. The operational safety, longevity, and suitability for use of the indicator all depend on regular and careful maintenance.

8.2 Torque Values

<table>
<thead>
<tr>
<th>Indicator Body to Cavity</th>
<th>Torque Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>420 Bar</td>
<td>100Nm+10Nm</td>
</tr>
</tbody>
</table>

8.3 Service Measures
- Spare parts must fulfill the technical requirements that are specified by the manufacturer. This is always guaranteed for original spare parts.
- Keep tools, working area and equipment clean.
- After removing the indicator, clean all parts, check for damage or wear and replace parts if necessary.
- When changing an indicator, it is essential that a high level of cleanliness must be maintained.
- When an indicator is removed the cavity should be covered to prevent contamination.

8.4 Service Intervals
The clogging indicator must be included in the recurrent testing of the electrical system in accordance with EN 60079-17.

8.5 Seal Replacement
If slight or severe leakage is detected from the indicator port, then the elastic seals may need replacing.

The system must be isolated and prepared for maintenance in accordance with Section 5 of this manual.

Once the hydraulic system is deemed safe and the appropriate permissions have been granted, remove the indicator from the filter assembly with a 25mm spanner. Ensure that the sealing faces are not damaged during the removal process. Remove the existing seals carefully, ensuring the sealing grooves are not damaged. Inspect the sealing faces for damage and ensure they are free from contamination. Replace the seals with those outlined in Section 6.1 Only genuine replacement parts should be used.

The elastic seals should be wetted with clean operating fluid and stretched on for assembly, with care taken not to roll the seals into the grooves. Check the indicator cavity for contamination and clean if necessary. Install the indicator as per Section 5.2

8.6 Removing the Clogging Indicator
Before any work is commenced, correct authorisation must be obtained from the appropriate responsible person.

Switch off the hydraulic system and release the pressure in the filter or system using the relevant bleed point. (Collect any accumulated fluid in a suitable container and clean or dispose of the fluid in accordance with any local environmental regulations).

Unscrew the clogging indicator using a 25mm spanner across the flats provided for fitting. Ensure the work area is as clean as possible.

The hydraulic system must only be switched back on once the clogging indicator port has been fitted with either a pressure resistant blanking plug or a suitable clogging indicator.

8.7 Installing the Clogging Indicator
- Lubricate the seal rings and thread on the indicator body, and the port in the filter head, with clean operating fluid.
- Apply thread sealant to the top two threads of the fluid connection. Avoid applying glue to the seals.
- Screw in the indicator using a spanner and tighten to the correct torque
- Switch on the hydraulic system and power supply to the clogging indicator.
- Check the clogging indicator for leakage.
- Vent the filter at an appropriate point.

The clogging indicator only responds when fluid is flowing through the filter being monitored. The clogging indicator may respond during a cold start of the hydraulic system. If the clogging indicator responds during a cold start only, it is possible that the element does not need to be changed yet.

Once the indicator is fitted, please refer to the appropriate operators guide/manual for the MP Filtri Stainless Steel Filter.
